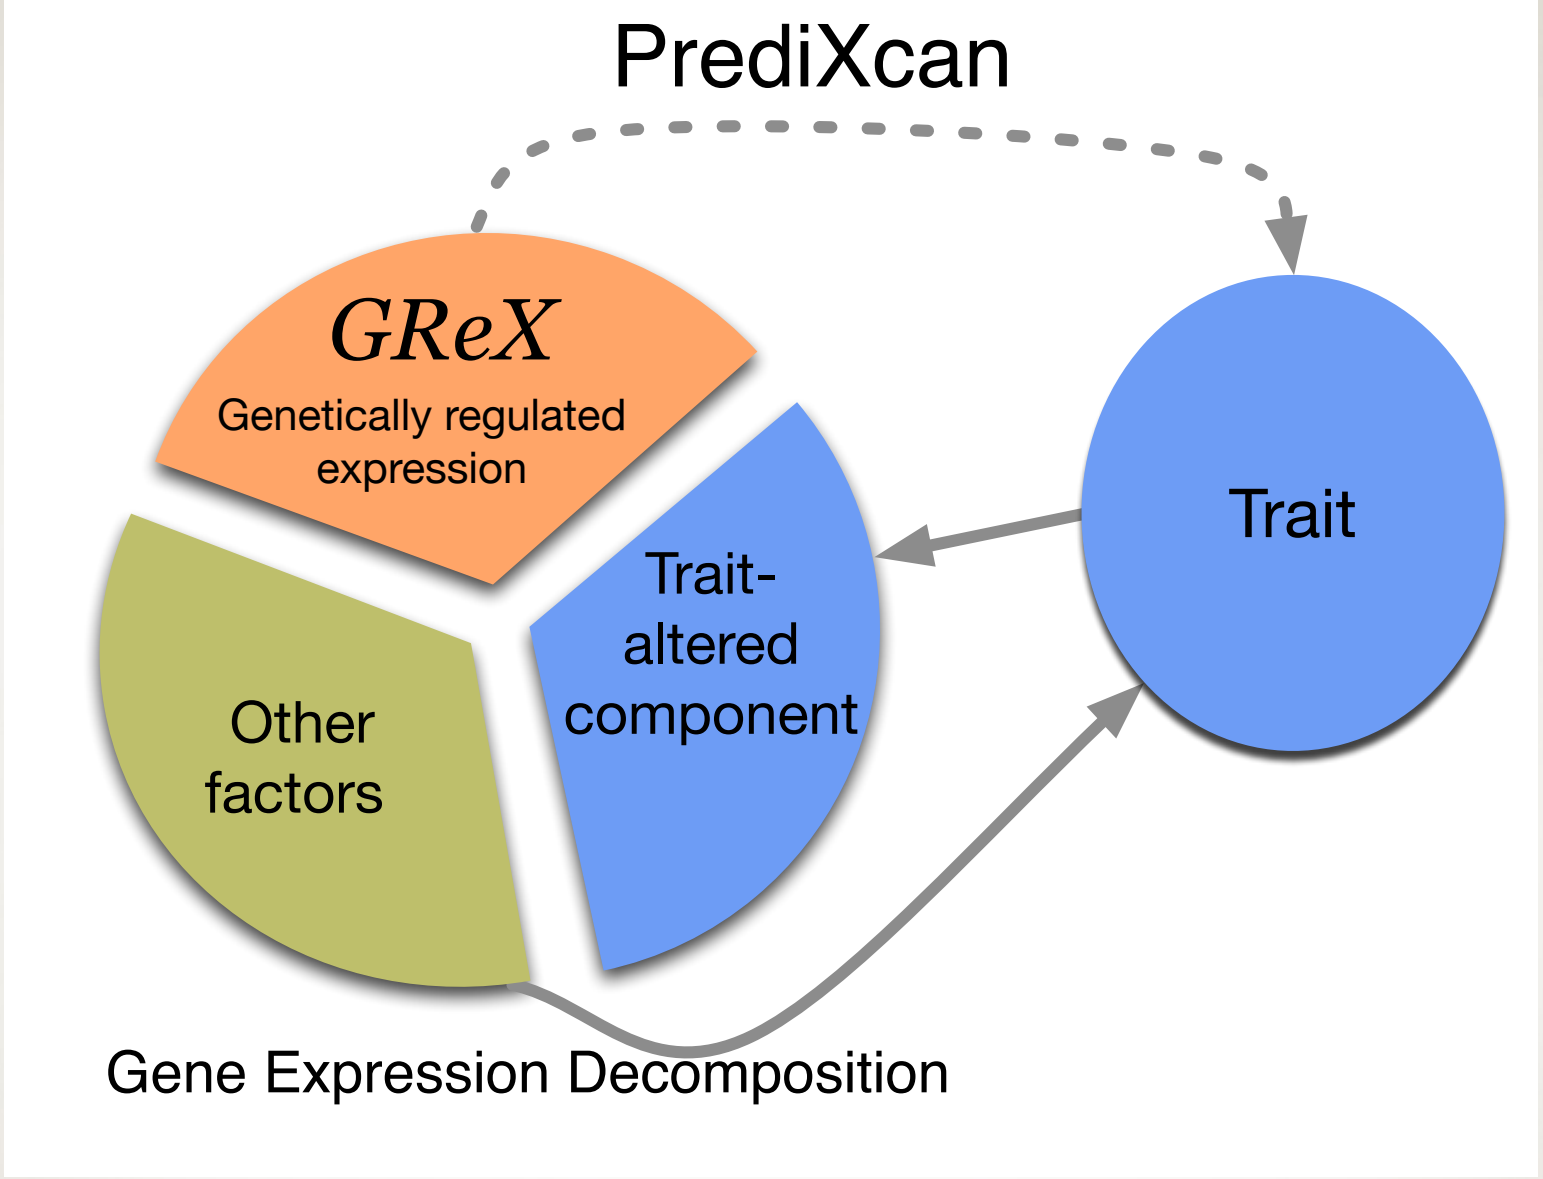
Integrating Genome, Transcriptome and EMR to Build a Gene to Medical Phenome Catalog

anderbilt Genetics Institute

Nancy J. Cox

Overview

- Updates on results of the application of PrediXcan to BioVU in 20K subjects
  - Novel gene-phenotype discoveries
  - More on the continuum of Mendelian to common disease; the first common variant translations for disease?
  - New ways to get more insight into biological mechanisms of disease
  - New big picture biology



Gamazon et al (2015) A gene-based association method for mapping traits using reference transcriptome data. Nature Genetics 47(9):1091-8. PMC4552594

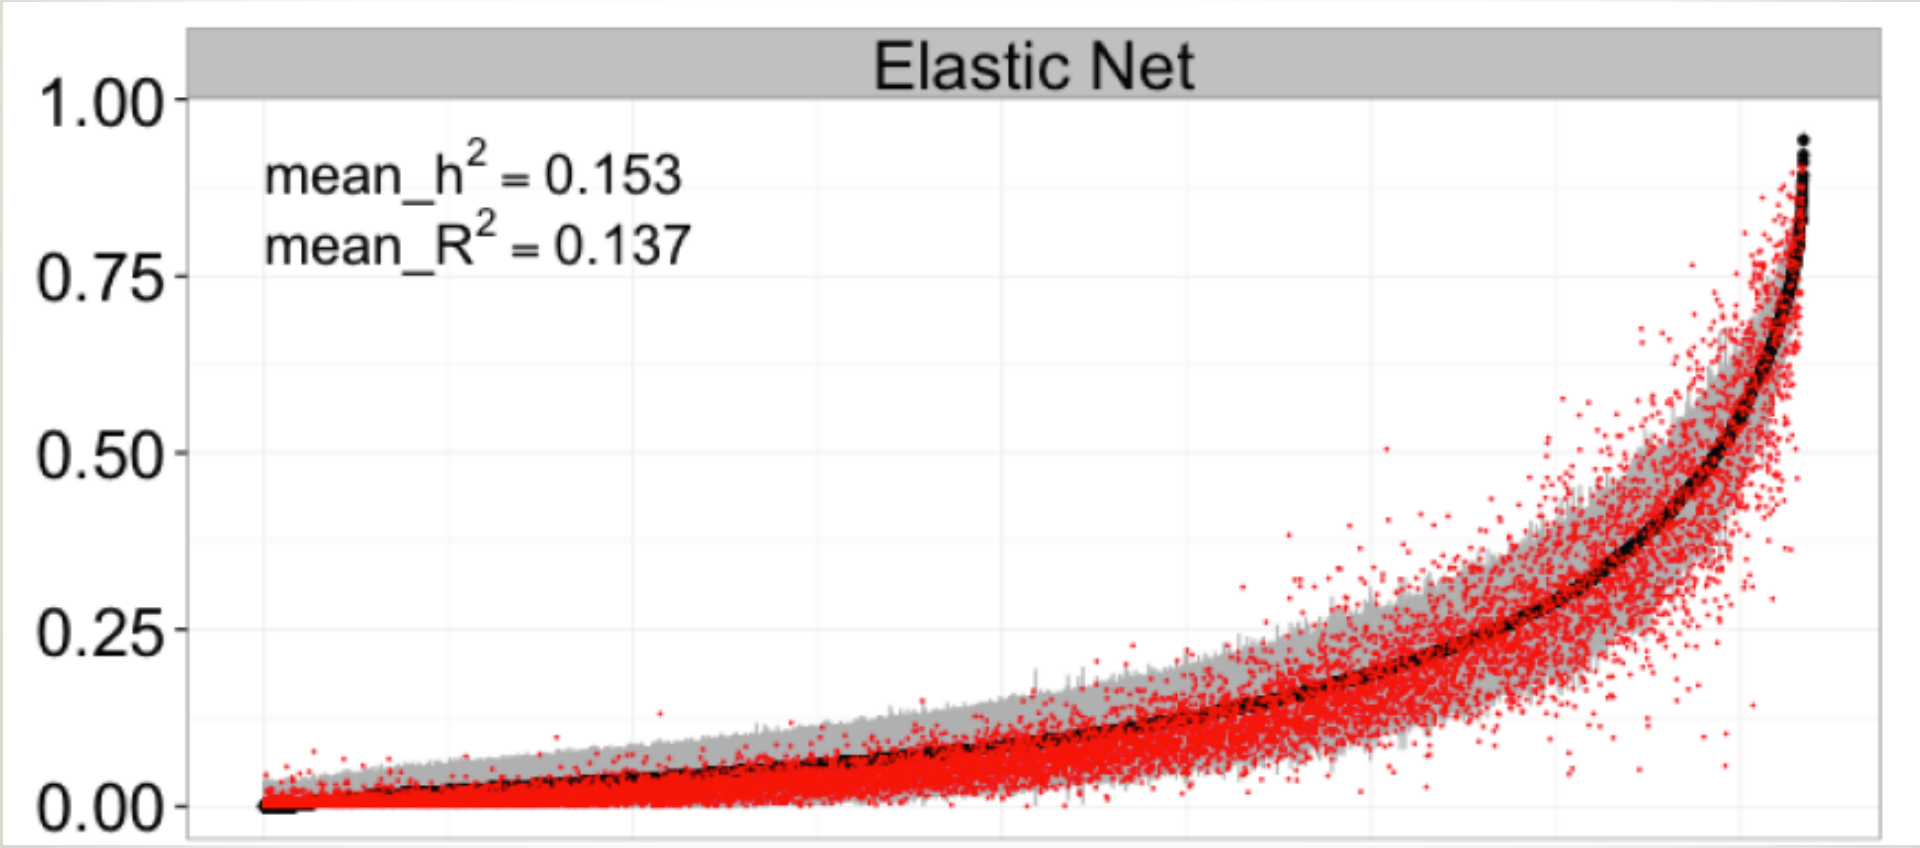
Association Test

Prediction Performance R^2 by Heritability

18,461 genes with r>0.2 in at least one tissue; 4-9K / tissue



Resources for EMR-based research at Vanderbilt

The Synthetic Derivative

A de-identified and continuously-updated image of the EMR: 2,500,000 subjects

BioVU

Subjects with DNA: >215,000

- Dense (GWAS-level) genotypes: ~20,000
- Exome chip data: 36,000

Resources for EMR-based research at Vanderbilt 2017

The Synthetic Derivative

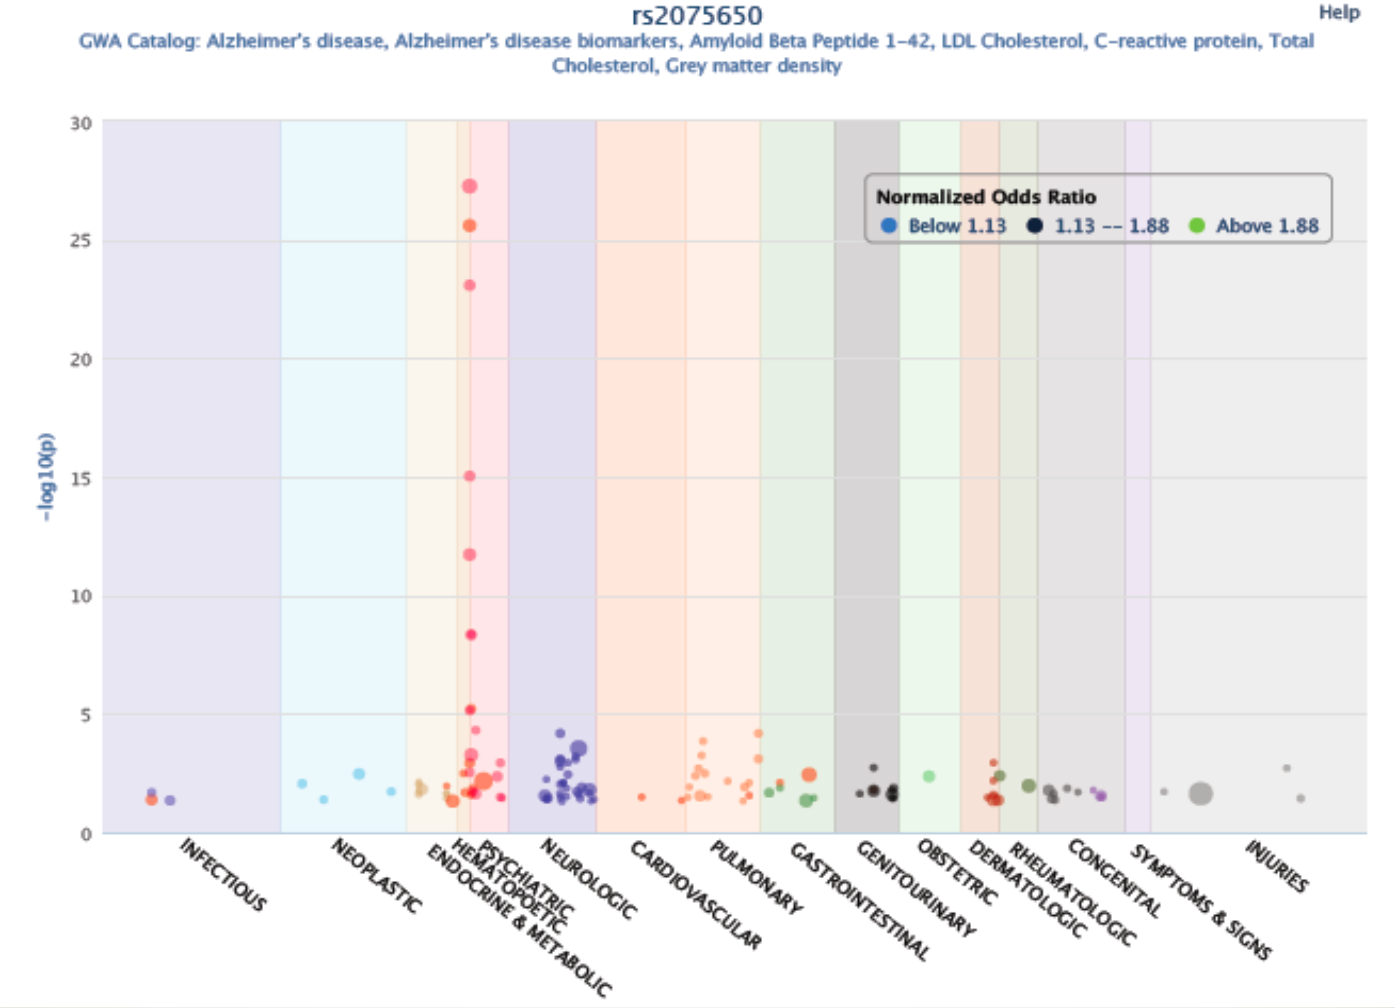
A de-identified and continuously-updated image of the EMR: 3,000,000 subjects

BioVU

Subjects with DNA: >225,000

- Dense genotypes: >120,000
- Whole genome or exome sequencing: ~1000's

Phenome-wide Association Study (PheWAS)



BioVU X PrediXcan: Gene-based PheWAS

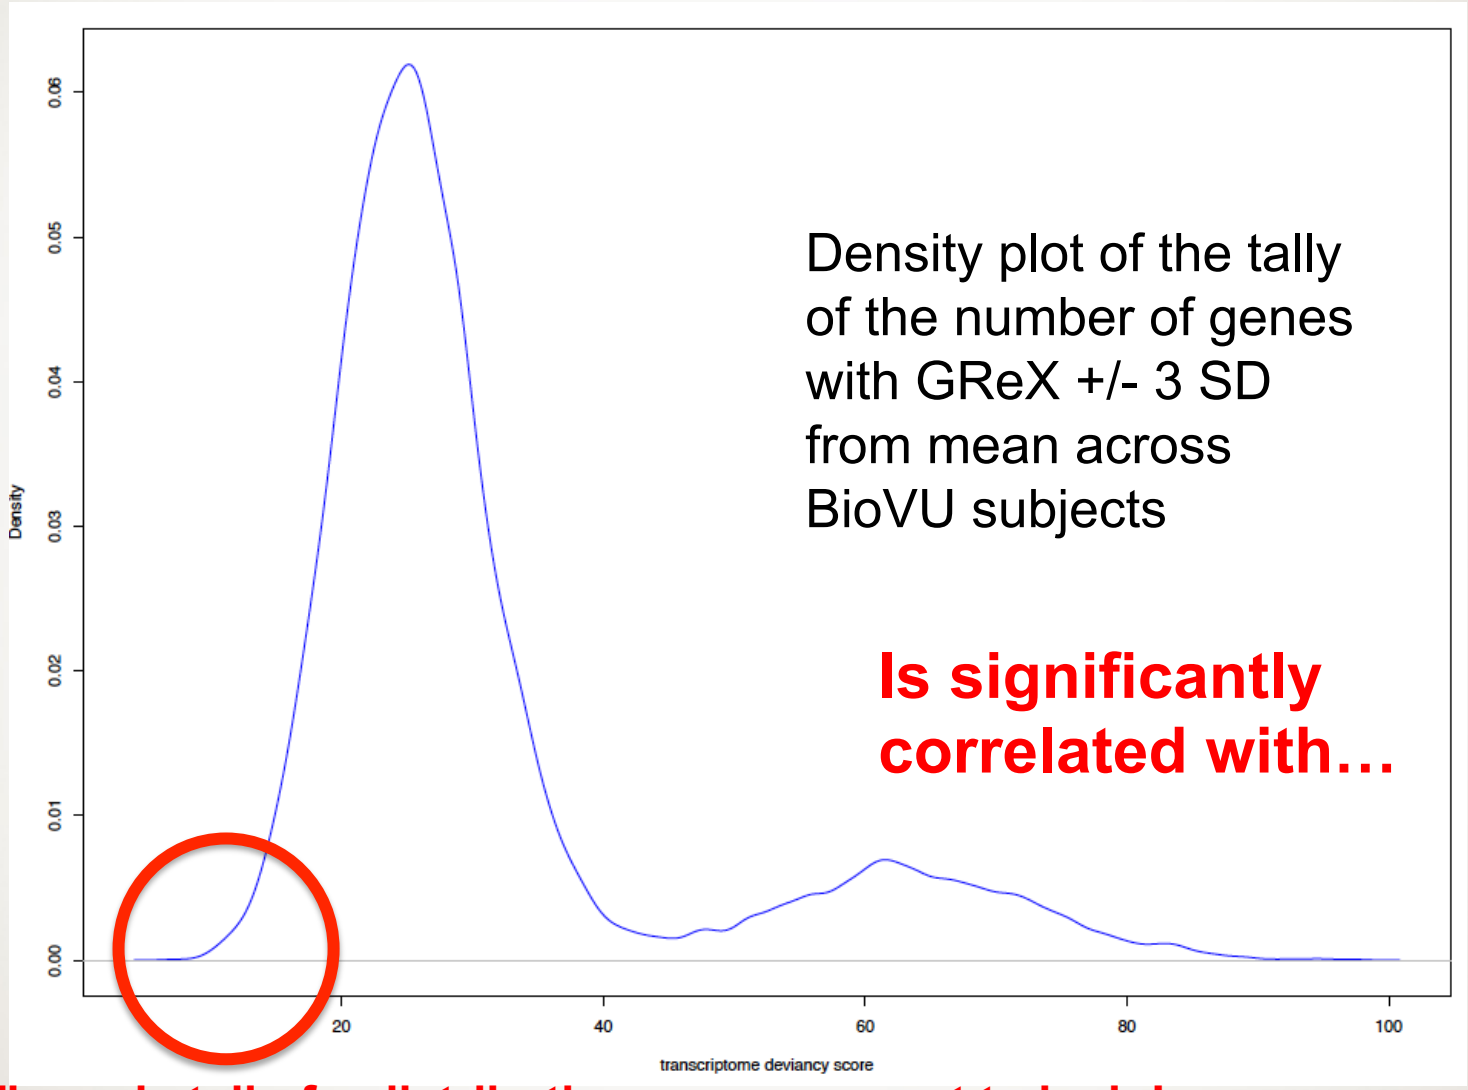
Comprehensive Gene X Medical Phenome Catalog

Knock-down each gene in each tissue and read out consequences across the medical phenome

Up-regulate each gene in each tissue and read out consequences across the medical phenome

An *in silico* Discovery Engine

Deviance of the Transcriptome



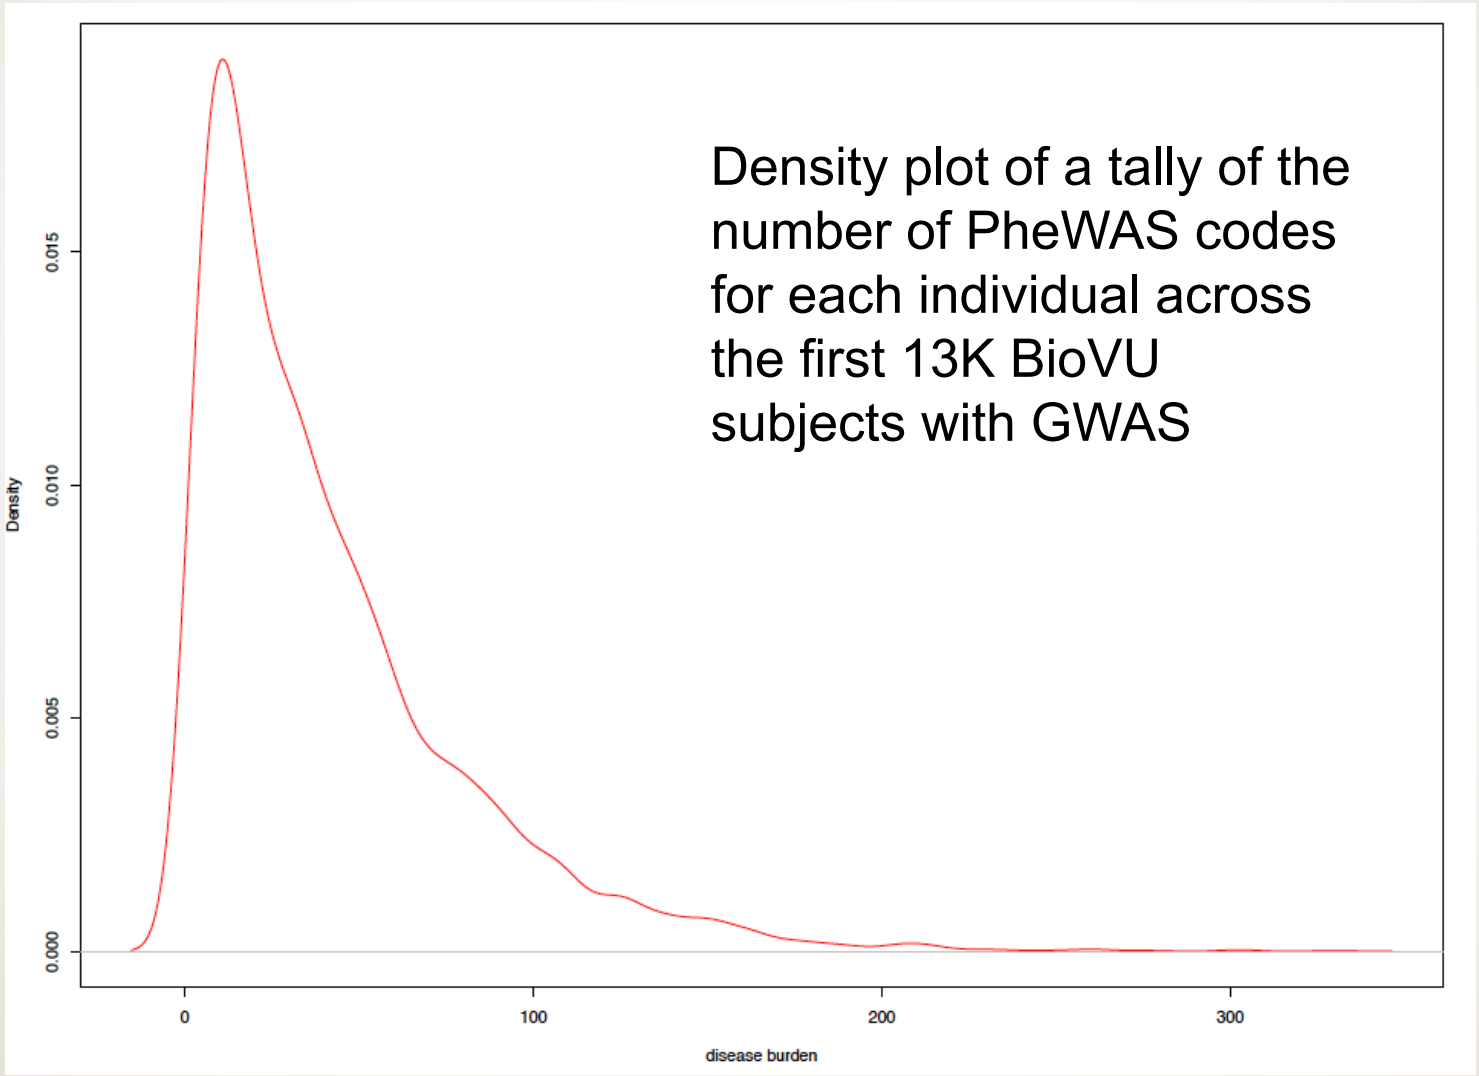
Density plot of the tally of the number of genes with GReX +/- 3 SD from mean across BioVU subjects

Is significantly correlated with…

The only tail of a distribution you ever want to be in!

VANDERBILT UNIVERSITY MEDICAL CENTER

The Burden of Medical Disease



Density plot of a tally of the number of PheWAS codes for each individual across the first 13K BioVU subjects with GWAS

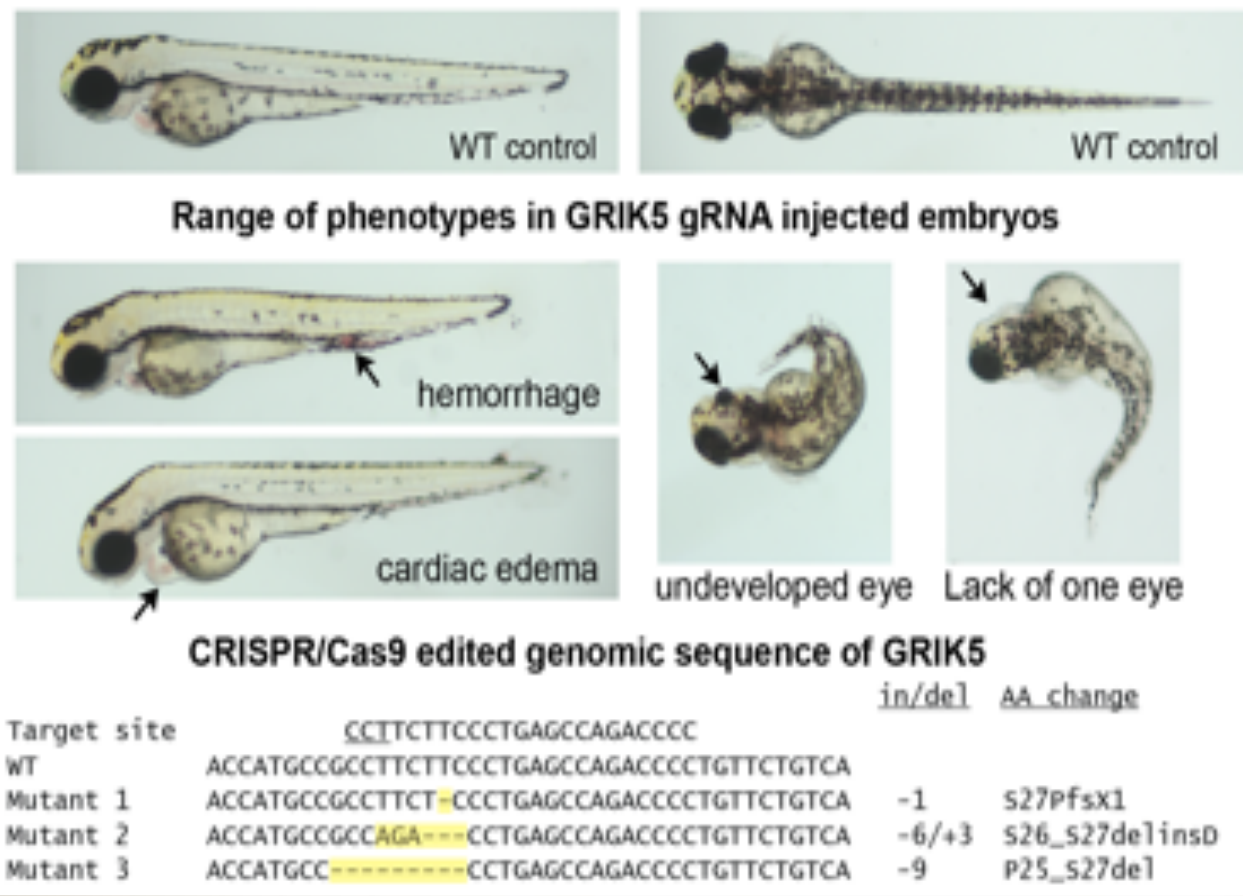
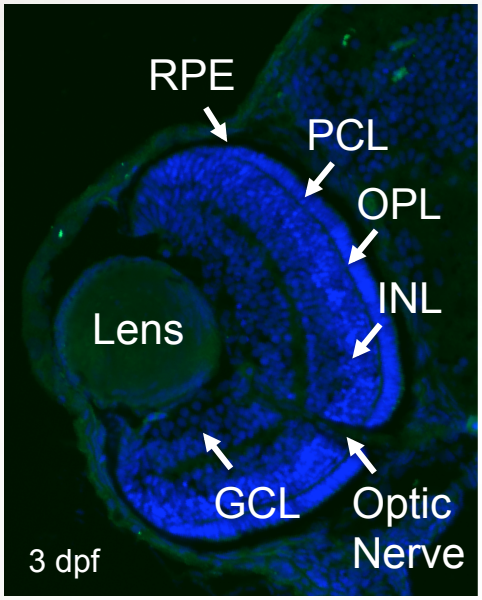
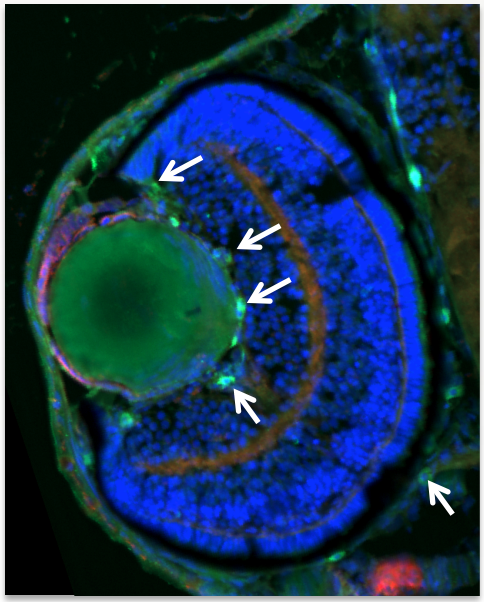
An Eye Super Gene?



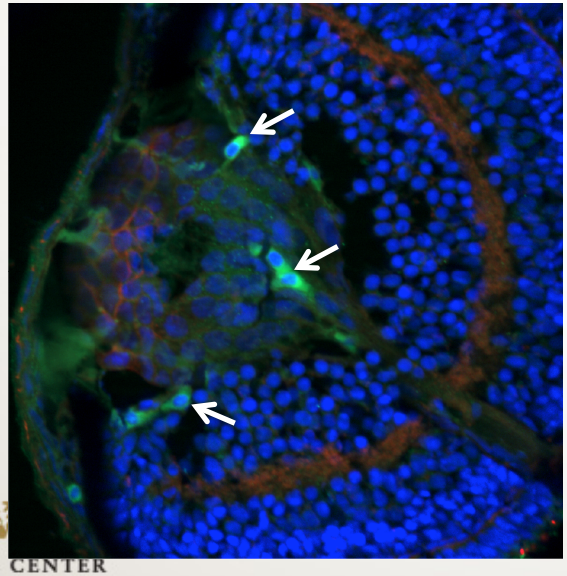
Zebrafish studies conducted in the Zebrafish Aquatic Facility by Ela Knapik, and students Daniel Levin, Gokhan Unlu, and Jessica Brown

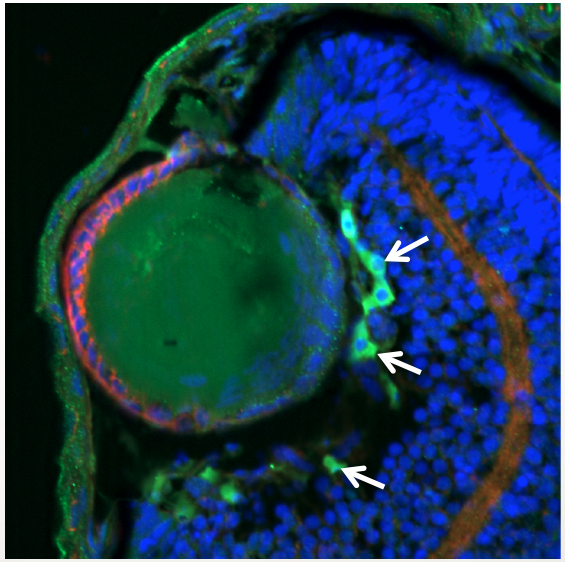
GRIK5 protein antibody staining in the zebrafish eye





RPE – Retinal Pigment Epithelium
PCL – Photoreceptor Cell Layer
OPL – Outer Plexiform Layer
INL – Inner Nuclear Layer
GCL – Ganglion Cell Layer





Nuclei (DAPI)
GRIK5

Continuum from Mendelian to Complex

Continuum from LOF to deleterious to ↓ expression

Nuclear Factor I, X-type – *NFIX*

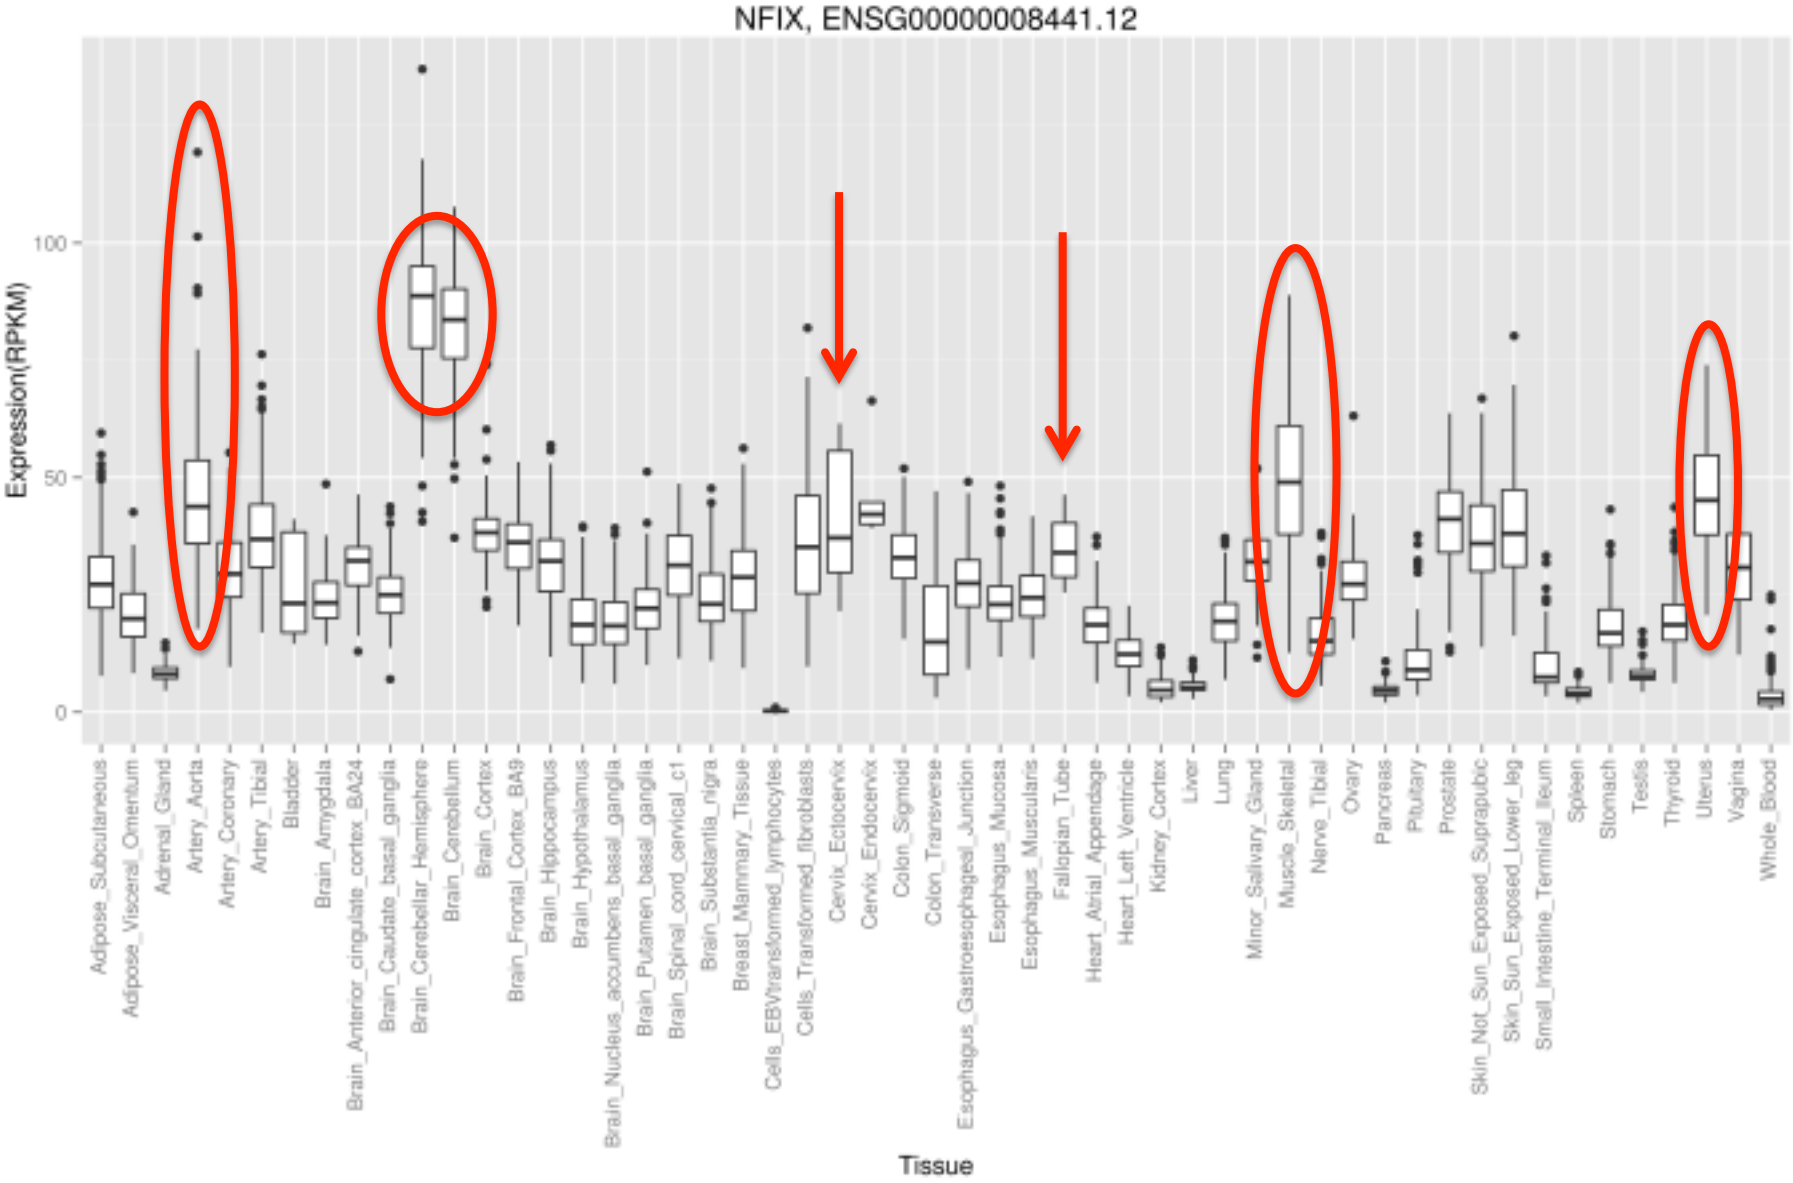
Mutations associatated with autosomal dominant diseases:

Marshall-Smith Syndrome

- Accelerated bone formation in hands and feet; fracture
- Diminished muscle tone
- Breathing difficulties; larynx and trachea "floppy"
- Facial features, blue sclera
- Mental and motor delays
  - Speech absent/abnormal
  - Intellectual disability / impairment

Sotos Syndrome 2

- Overgrowth in childhood; curvature/scoliosis, facial
- Muscle weakness
- Abnormalities of kidney, heart, eyes, ears, deafness
- Benign tumors, low-grade malignancies; seizures
- ID, behavior problems, speech/language disease
  - ADHD, OCD, etc
  - Stuttering, speech/language



VANDERBILT UNIVERSITY
MEDICAL CENTER

NFIX Reduced Predicted Expression (blood)

Inflammatory diseases of uterus, except cervix	3.74E-19
Sialolithiasis	1.17E-12
Congenital anomalies of esophagus	7.05E-12
Protozoan infection ?	1.42E-11
Pelvic inflammatory disease, NOS	4.04E-11
Giant cell arteritis	1.11E-10
Acute inflammatory pelvic disease	4.29E-10
Major puerperal infection ?	5.54E-10
Complications in administration of anesthetic / other sedation in labor delivery	5.81E-10
Cervical intraepithelial neoplasia [CIN] [Cervical dysplasia]	3.29E-09
Cardiac and circulatory congenital anomalies	7.04E-09
Aphakia and other disorders of lens	1.37E-08
Hypotony of eye	3.06E-08
Pemphigus and pemphigoid	3.32E-08
Pelvic inflammatory disease (PID)	3.43E-08
Hemarthrosis ?	8.65E-08
Viral infection ?	7.05E-07
Congenital anomalies of posterior segment of eye	1.09E-06
Cardiac congenital anomalies	1.40E-06

In other tissues:

Facial weakness	5.30E-10
Pneumonia due to fungus	5.46E-08
Diseases of larynx and vocal cords	1.18E-06
Symptoms of respiratory system	6.11E-06
Symbolic dysfunction	8.00E-06
Speech and language disorder	8.57E-06
Disorders of tympanic membrane	2.21E-14
Neural tube defects	6.07E-06
Kidney anomalies, disease	range
Fractures (ankle, foot, patella…)	range
Seizures, convulsions, epilepsy	range

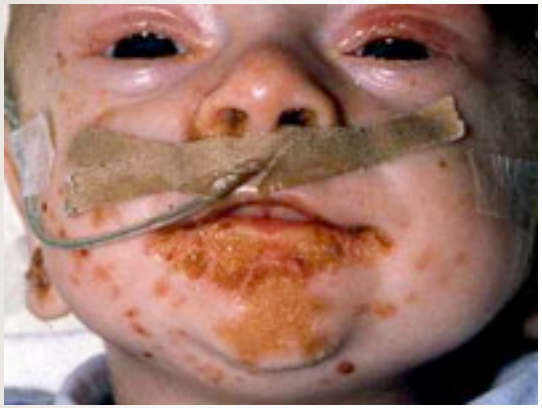
Dominant mutations: Sotos syndrome 2; Marshall-Smith Syndrome

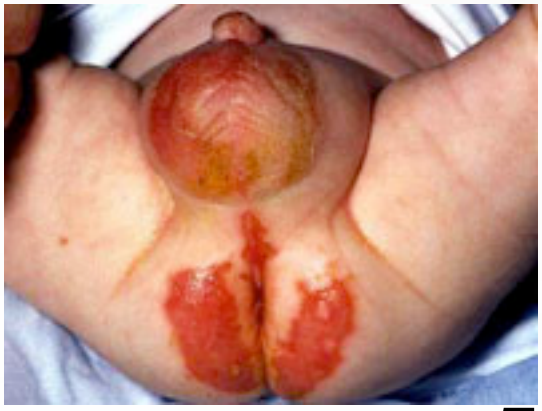
VANDERBILT UNIVERSITY MEDICAL CENTER

What we are doing…

- **Database of Mendelian disease genes and associated phenotypes** Improve diagnosis, Cycle back to phenotyping
  - Rare disease characterized in just a few patients; data-driven models for range of clinical features
  - Need for OUTCOMES as patients live longer
- **Creating a database of "Mendelian genes in waiting"**
  - Genes not (yet) characterized as Mendelian, but have multiple congenital anomalies and ID (and other really bad phenotypes)
  - One of the few ways to predict "de novo" phenotypes

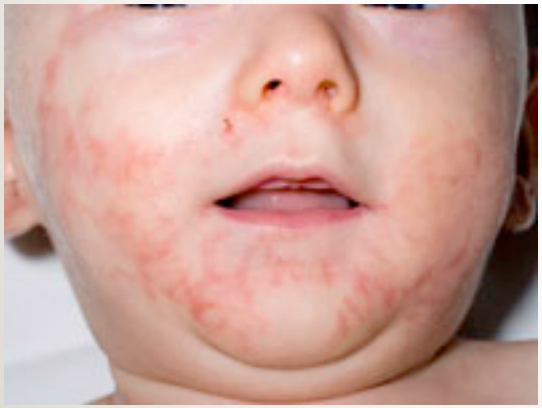
SLC39A4: Autosomal recessive acrodermatitis enteropathica

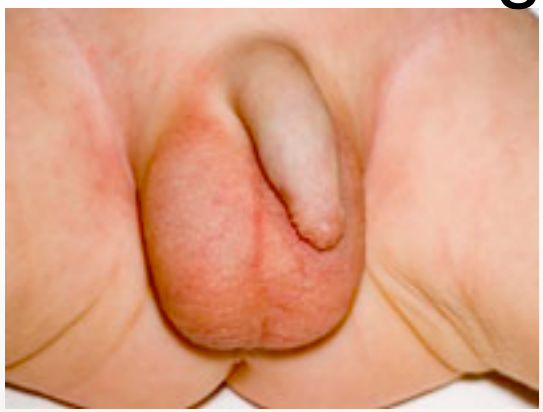




Other phenotypes: chronic diarrhea, gastritis, serious behavioral problems, anemia; fatal in early childhood

5 days after zinc supplementation





VANDERBILT UNIVERSITY MEDICAL CENTER

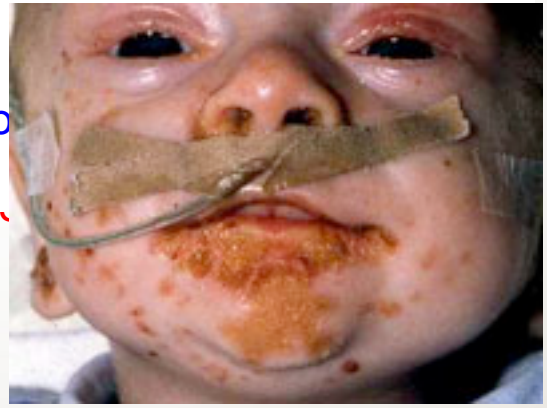
SLC39A4 Reduced Predicted Expression (blood)

★ Other hypertrophic cardiomyopathy	1.61E-16
Hereditary hemolytic anemias	1.24E-13
★ Benign neoplasm of other fem	1.45E-10
★ Schizophrenia	3.43E-09
Acquired deformities of hip	1.82E-07
Toxic effect of corrosive aroma	2.45E-07
Mineral deficiency NEC	2.23E-06
Kaschin-Beck disease	2.92E-06
★ Multiple gestation	3.09E-06
Iodine hypothyroidism	3.13E-06
★ Abnormal spermatozoa	3.56E-06
★ Cervical incompetence	4.76E-06
Intestinal disaccharidase defici[illegible]	6.78E-06
Gastritis and duodenitis, NOS	1.00E-05

In other tissues:

Impetigo	10.0E-22
Pilonidal cyst	1.31E-11
T2D	8.52E-11
Pruritis and related conditions	4.27E-10
Disorders of mineral metabolism	2.29E-08
Acute renal failure, …	3.70E-08
Primary pulmonary hypertension	8.69E-08
Suicidal ideation or attempt	1.64E-07
Other cerebral degeneration	9.26E-07
Bullous dermatitis	6.24E-06
Psoriasis	
Diarrhea, ...	
Gout and crystal arthro	



Recessive mutations: Acrodermatitis enteropathica

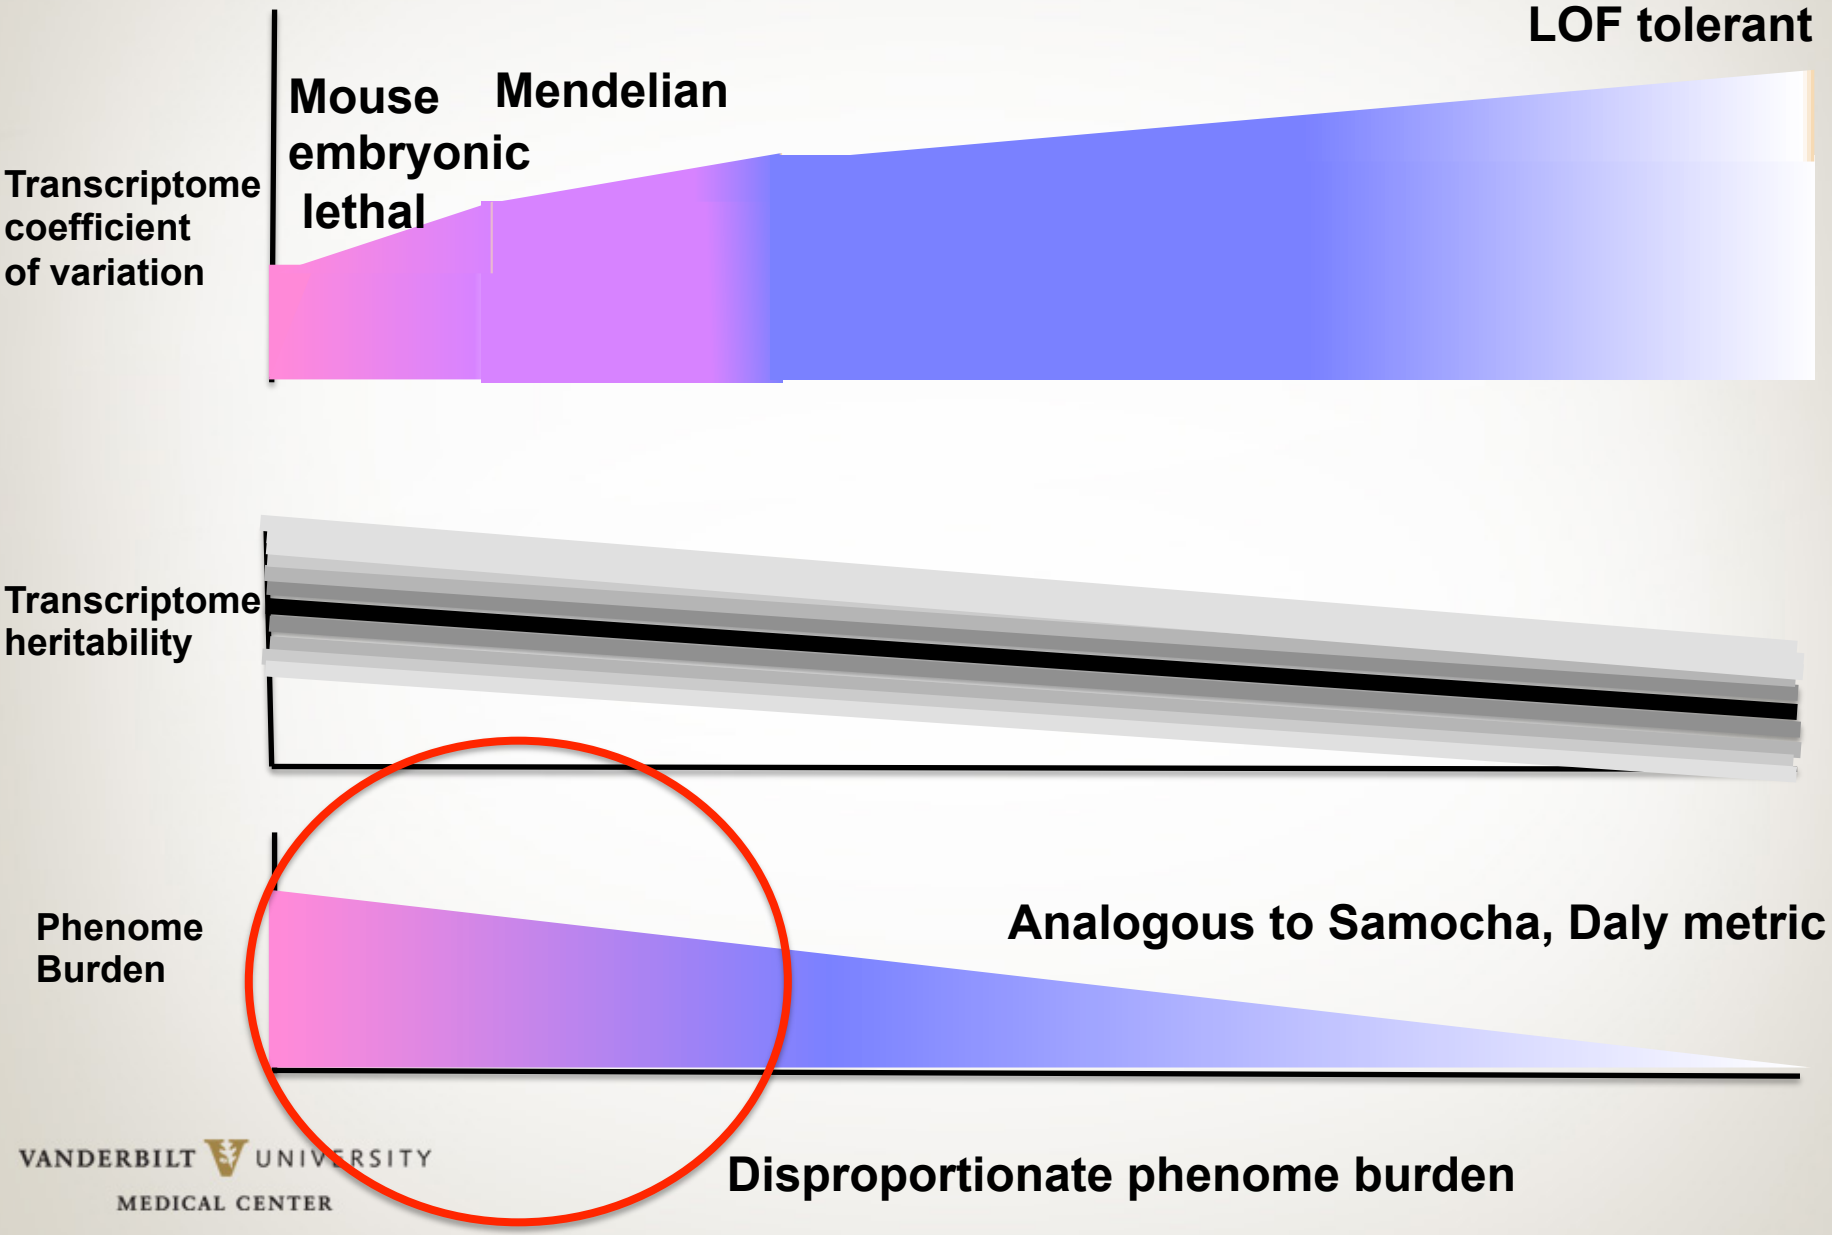
VANDERBILT UNIVERSITY MEDICAL CENTER

Continuum between Mendelian and Common Disease

- There are dozens of Mendelian diseases that can be treated reasonably effectively with innocuous therapies – vitamin or mineral supplementation or dietary intervention
- There WILL be more people with increased risk of disease due to reduced expression of JUST these genes than there are people who have a Mendelian disease

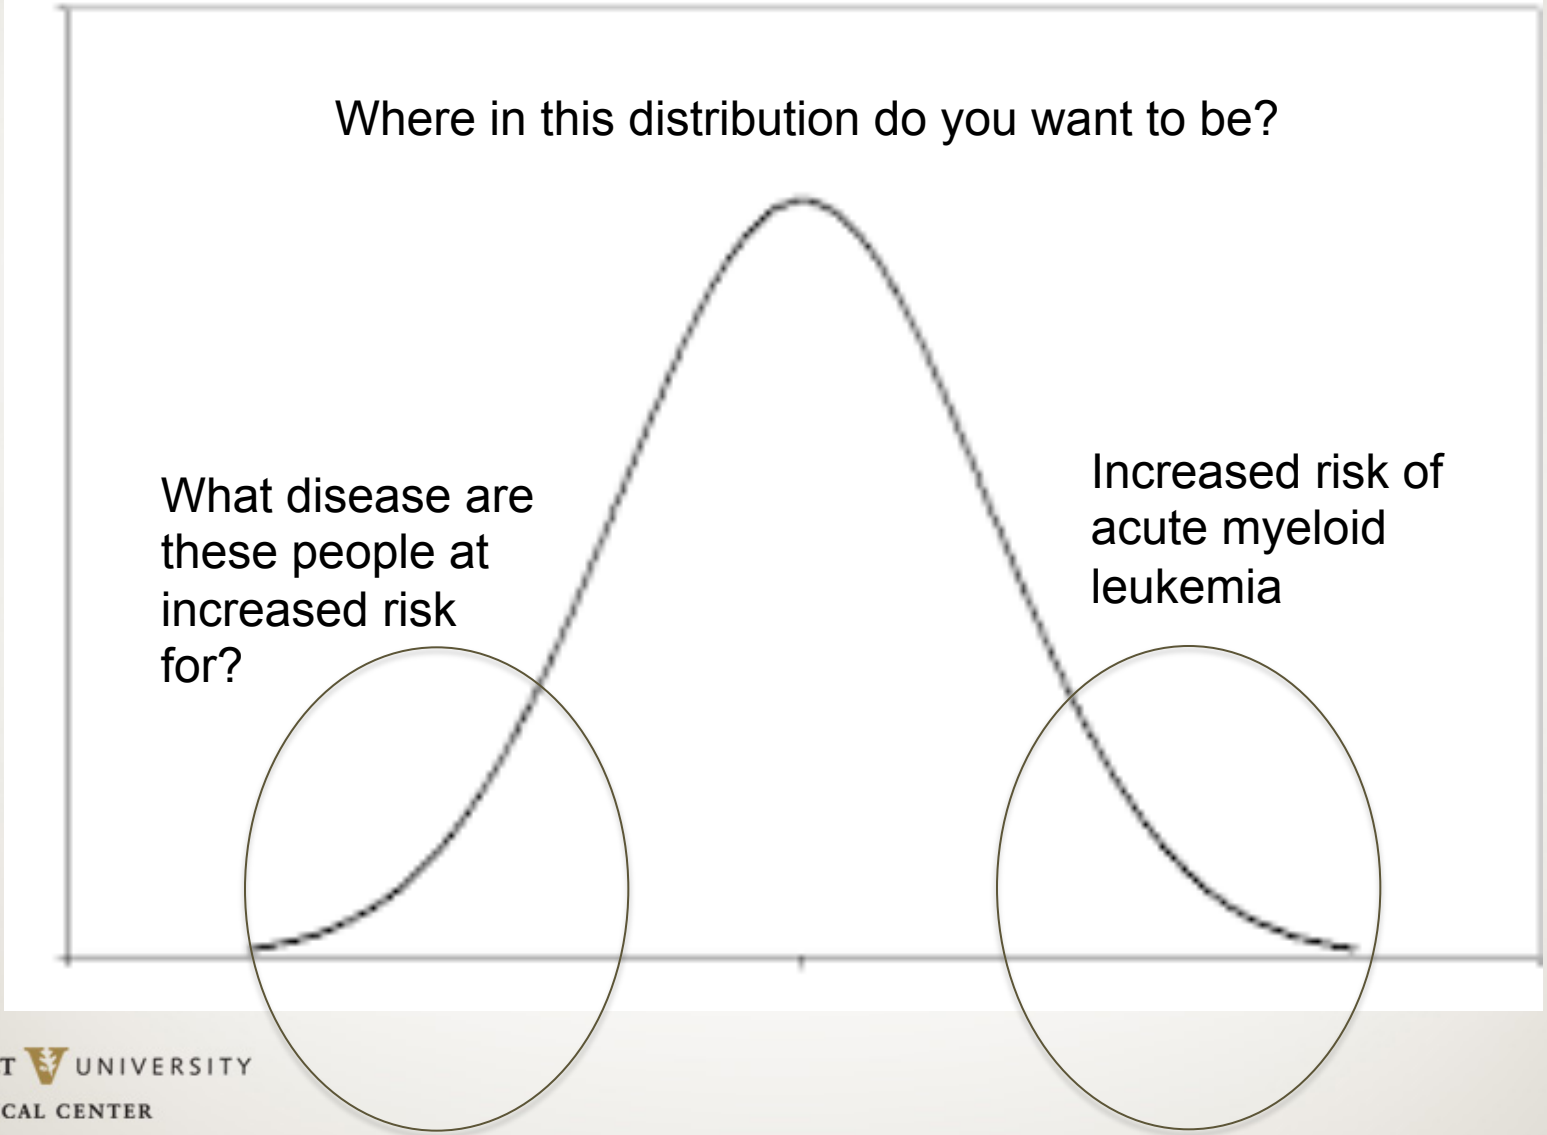
Acrodermatitis enteropathica: 1 / 500,000 live births; none in BioVU now
>5000 patients in BioVU today are at high risk for worst sub-phenotypes
>300 patients in BioVU will have multiple of the worst sub-phenotypes

Big Picture …



VANDERBILT UNIVERSITY MEDICAL CENTER

What Is the Opposite of Disease?



VANDERBILT UNIVERSITY MEDICAL CENTER

Cancer Type	"Opposite" Diseases
Leukemia / Lymphoma	Sepsis, SIRS
Breast Cancer	Diverticulitis, diverticulosis, Hemorrhage of ulcer, GI tract, rectum, anus Cholelithiasis, Cholecystitis
Bone Cancer	Acute Bronchitis, bronchiectasis Pulmonary edema post-infection Pulmonary inflammation

Wound Healing / Innate Immunity

- Top genes affecting risk of kidney failure characterized as “pivot” on the axis of innate immunity vs. wound healing
- A variety of additional phenotypes consistently observed as associated with these same genes
- Consistency in both directions
