“A surgeon who uses the wrong side of the scalpel cuts her own fingers and not the patient;

if the same applied to drugs they would have been investigated very carefully a long time ago”

Rudolph Bucheim
Beitrage zur Arzneimittellehre, 1849

INSTITUTE OF PHARMACOGENOMICS AND INDIVIDUALIZED THERAPY | UNC-CHAPEL HILL | IPIT.UNC.EDU

The clinical problem

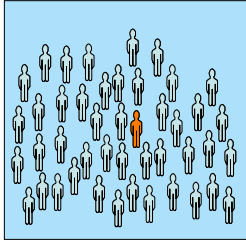

- Multiple active regimens for the treatment of most diseases
- Variation in response to therapy
- Unpredictable toxicity

\$\$\$\$\$\$\$\$\$\$\$\$\$\$\$\$

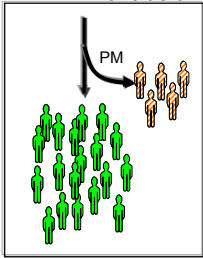

With choice comes decision

what is your intent?

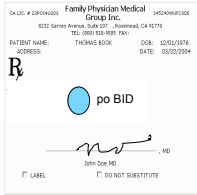

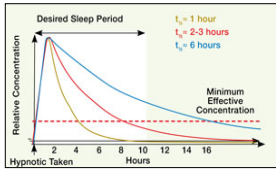

Drug Safety

clinical trial

Clinical practice

Pharmacogenomic examples-2012

- *bcr/abl* or 9:22 translocation—imatinib mesylate*
- HER2-*neu*—trastuzumab**
- C-kit mutations—imatinib mesylate**
- Epidermal growth factor receptor mutations—gefitinib
- Thiopurine S-methyltransferase—mercaptopurine and azathioprine*
- UGT1A1-irinotecan**
- CYP2C9/VKORC1-warfarin*
- HLA-B*5701-abacavir *
- HLA-B*1502-carbamazepine *
- CYP2C19-clopidogrel
- IL28B-interferon
- Cytochrome P-450 (CYP) 2D6—5-HT3 receptor antagonists, antidepressants, ADHD drugs, and codeine derivatives, tamoxifen*

INSTITUTE OF PHARMACOGENOMICS AND INDIVIDUALIZED THERAPY | UNC-CHAPEL HILL

Applications of pharmacogenetics

- Explanation for untoward event (DPYD, CYP2D6)
- Required for insurance coverage (KRAS, EGFR, ABL)
- Identify low utility (KRAS)
- Dose selection (CYP2C9, CYP2C19)
- Therapy selection (CYP2C19)
- Preemptive prediction (HLA-B*5701)

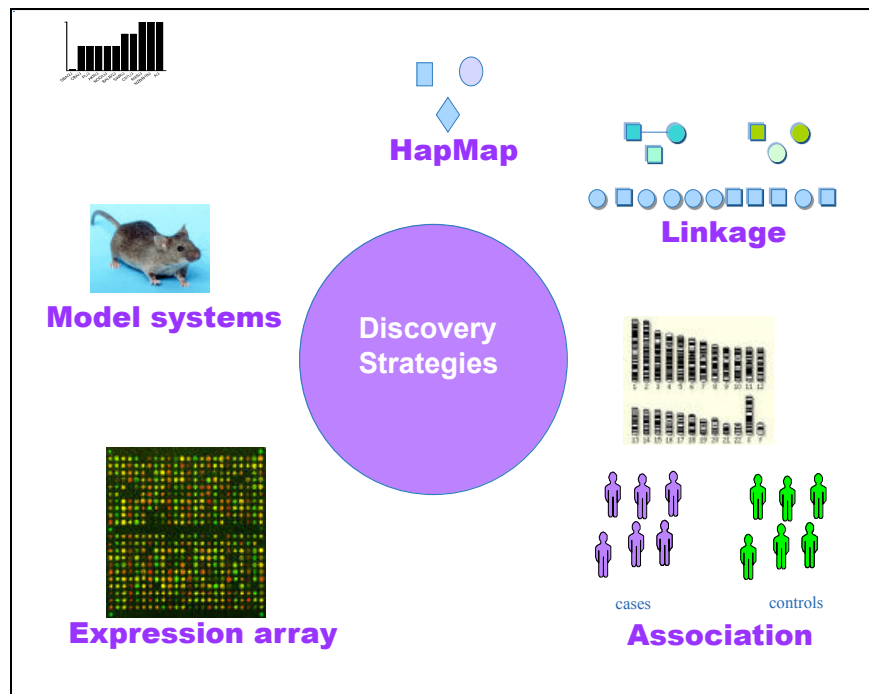

INSTITUTE OF PHARMACOGENOMICS AND INDIVIDUALIZED THERAPY | UNC-CHAPEL HILL

What needs to be done to determine hope vs hype?

- Find the 'right' biomarkers
- Validate in robust datasets
- Apply them!

INSTITUTE OF PHARMACOGENOMICS AND INDIVIDUALIZED THERAPY | UNC-CHAPEL HILL | IPIT.UNC.EDU

We are only beginning to try!

- As of 3/10/12
 - Drug-related phenotypes represented
50/1196 GWA studies (4.1%)

 - 10/50 had ≥ 500 'cases'

 - 15/50 (30%) found no significant 'hits'
 - 29/50 PGx studies had a replication cohort

 - 8 contributed to changes in FDA 'package insert'

INSTITUTE OF PHARMACOGENOMICS AND INDIVIDUALIZED THERAPY | UNC-CHAPEL HILL | IPIT.UNC.EDU

Centre d' Etude du Polymorphisme Human (CEPH) Cell lines

- Large, multigeneration pedigrees widely studied
- Immortalized lymphoblastoid cell lines

Methodology

Cells counted, plated at 1×10^4 / well

Cells incubated with increasing concentrations of drug

Alamar blue vital dye indicator added

Viability relative to untreated control calculated by spectrophotometry

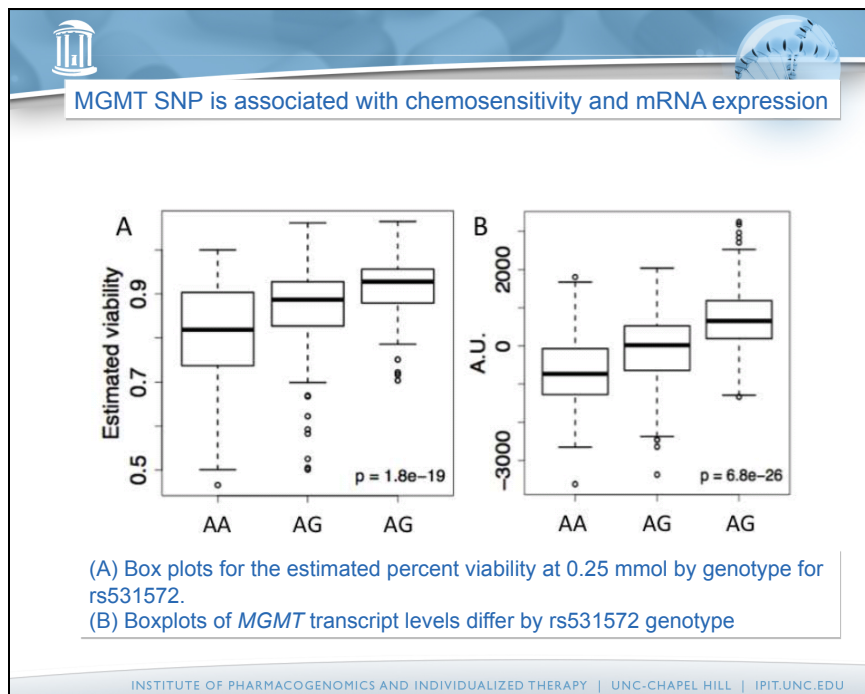

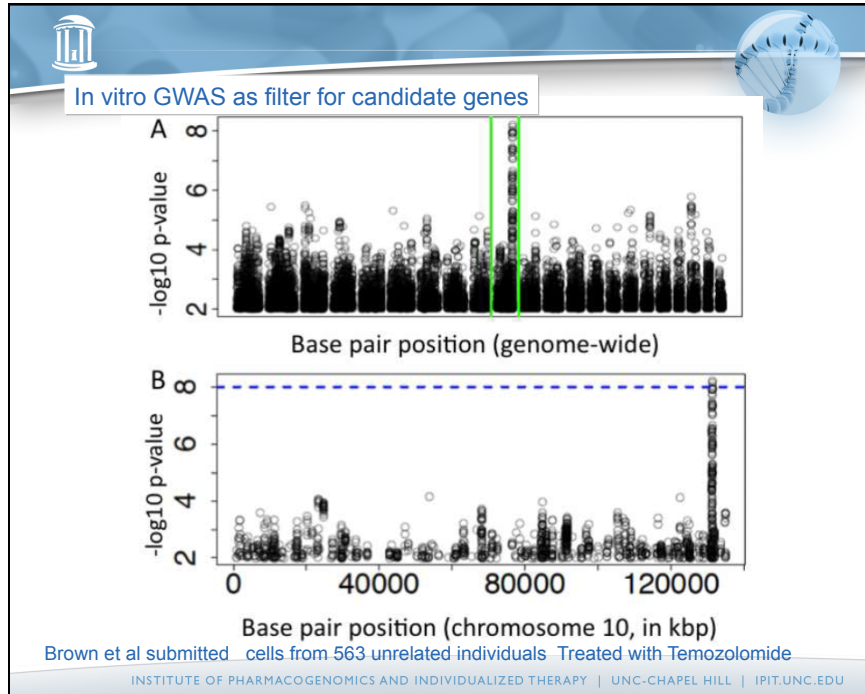

Significant Variation in Cellular Sensitivity to Docetaxel

'CE-PH/F-DA' project

- 126 CEPH cell lines from 14 nuclear families
- All FDA approved cytotoxic drugs + new kinase inhibitors/MTOR/demethylation
- No antiestrogen or vitamin A analogues
- Evaluate degree of heritability, presence of QTL(s), and evidence for correlations between drug sensitivity patterns.

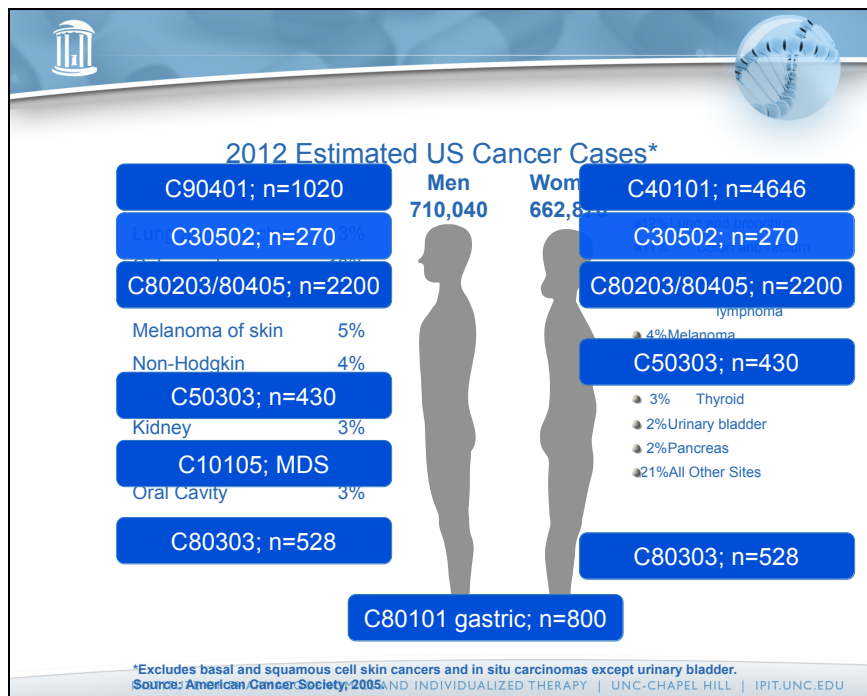

What needs to be done to determine hope vs hype?

- Find the 'right' biomarkers
- Validate in robust datasets
- Apply them!

INSTITUTE OF PHARMACOGENOMICS AND INDIVIDUALIZED THERAPY | UNC-CHAPEL HILL | IPIT.UNC.EDU

Docetaxel vs. Paclitaxel (Clinical data: SCOTROC1)

With:
 rian cancer

RT

Docetaxel 75 mg/m² 1-hr IV, followed by Carboplatin AUC 5* IV

Repeat q 3 wk for up to 6 cycles

Paclitaxel 175 mg/m² 3-hr IV, followed by Carboplatin AUC 5* IV

Repeat q 3 wk for up to 6 cycles

Study End Points
Primary: progression-free survival
Secondary: response rate, overall survival, toxicity, QOL

Sarah Glass, Alison Motsinger-Reif, Sharon Marsh,
 Bob Brown, Jim Paul

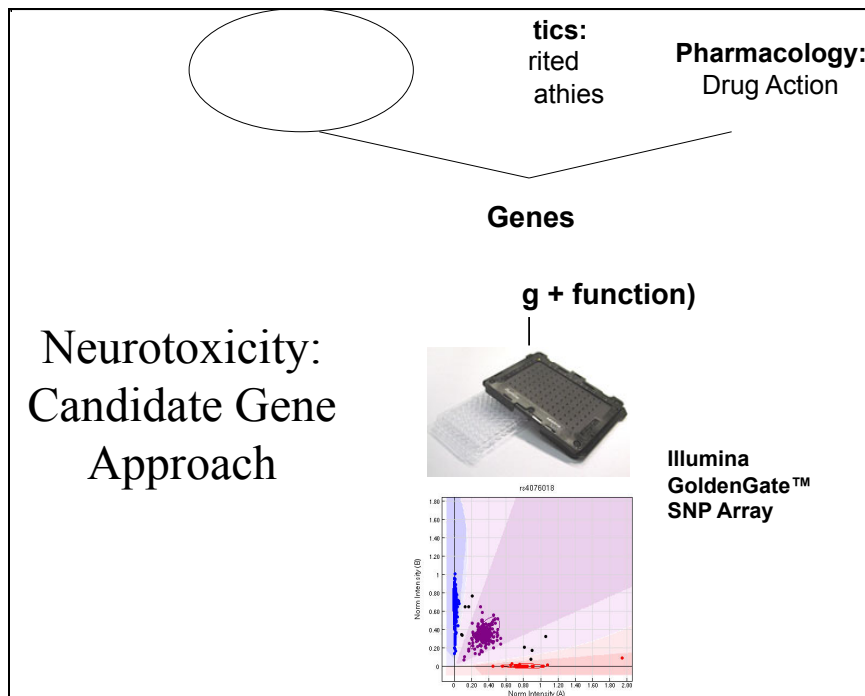

Docetaxel vs. Paclitaxel (Clinical data: SCOTROC1)

Table 5. NCI-CTC neurotoxicity in the Scottish Randomised Trial in Ovarian Cancer 1*

Grade	% of patients		P
	Docetaxel-carboplatin arm (n = 537)†	Paclitaxel-carboplatin arm (n = 532)‡

*NCI-CTC = National Cancer Institute-Common Toxicity Criteria.
 †Not available for two patients who died after one cycle.
 ‡Not available for one patient who died after one cycle.
 §All statistical tests were two-sided. P value from Mann-Whitney U test.
 ||Grades 1-4.
 ¶Total.

Vasey et al JNCI 2004

The filtering of Neuro-risk genotypes

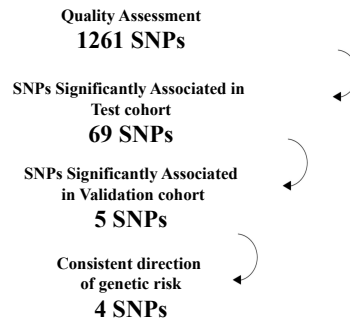

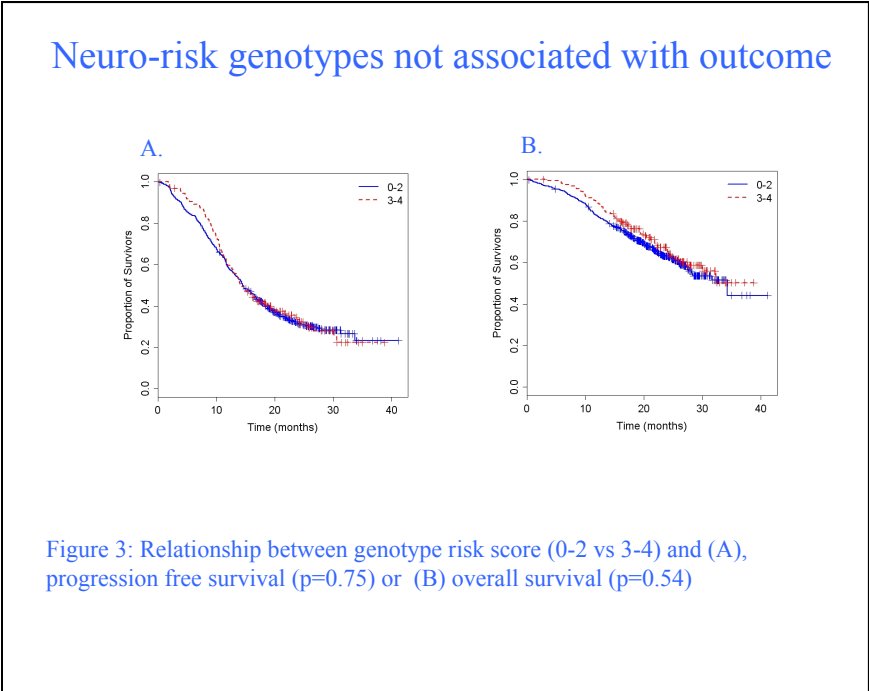

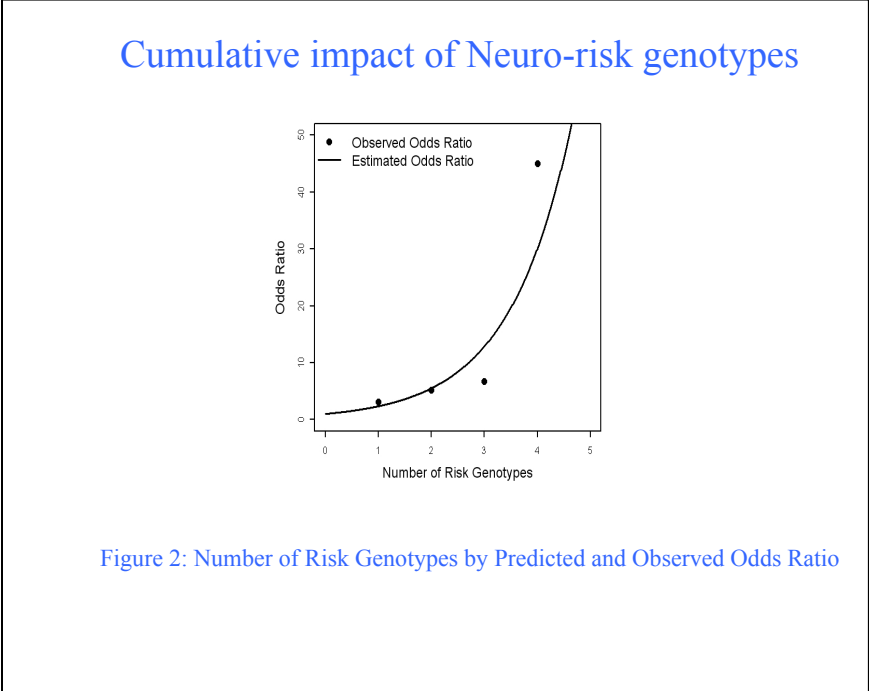

Figure 1: The workflow of the data analysis, represented by the narrowing number of SNPs at each stage of the analysis.

Table 1: SNPs significantly associated with severe neurotoxicity in the validation cohort

SNP	Gene	Base Change	Corrected P-value	Odds Ratio	95% CI	Risk Genotype
rs139887	SOX10	C->G	0.001	2.87	(1.4361, 5.7530)	CG
rs2849380	BCL2	A->G	0.013	4.08	(1.5254, 10.8975)	AA
rs544093	OPRM1	A->C	0.015	2.25	(1.2365, 4.0841)	AA
rs879207	TRPV1	A->G	0.002	2.31	(1.4467, 3.6767)	AG

Table 2: Percent PAR for each SNP and joint PAR

	rs139887	rs2849380	rs544093	rs879207	All SNPs
PAR (%)	45.8	9.1	50.2	38.4	84.9

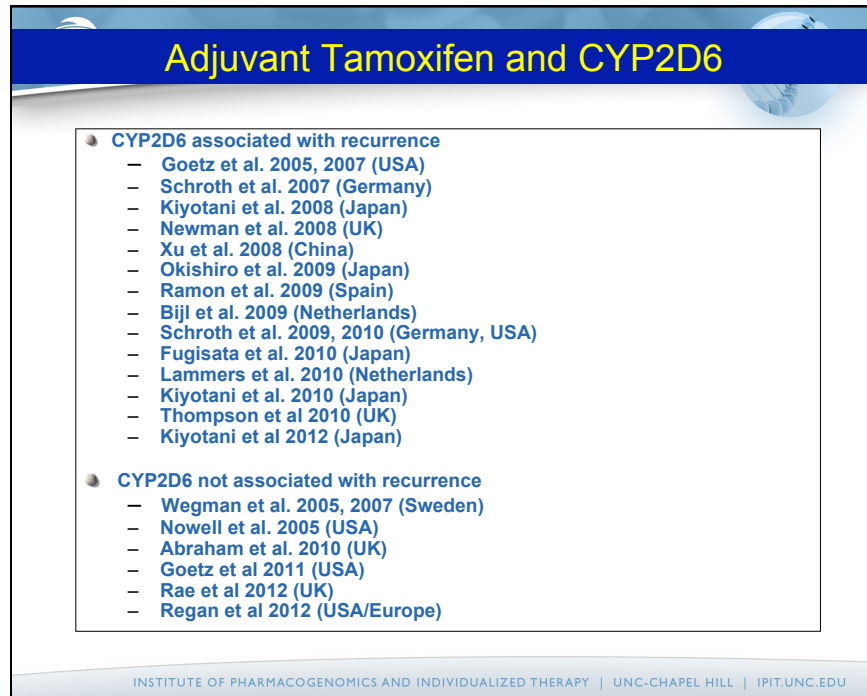

What needs to be done to determine hope vs hype?

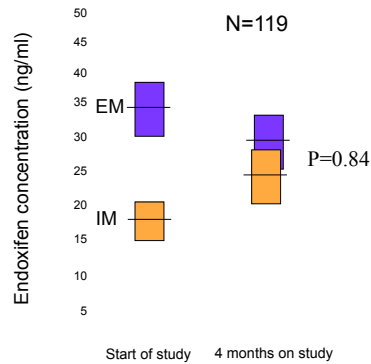

- Find the 'right' biomarkers
- Validate in robust datasets
- Apply them!

CYP2D6-guided tamoxifen dosing normalizes endoxifen levels in IM patients

All patients on tamoxifen 20 mg/day for 4 months then
 EM-20 mg
 IM-change to 40 mg

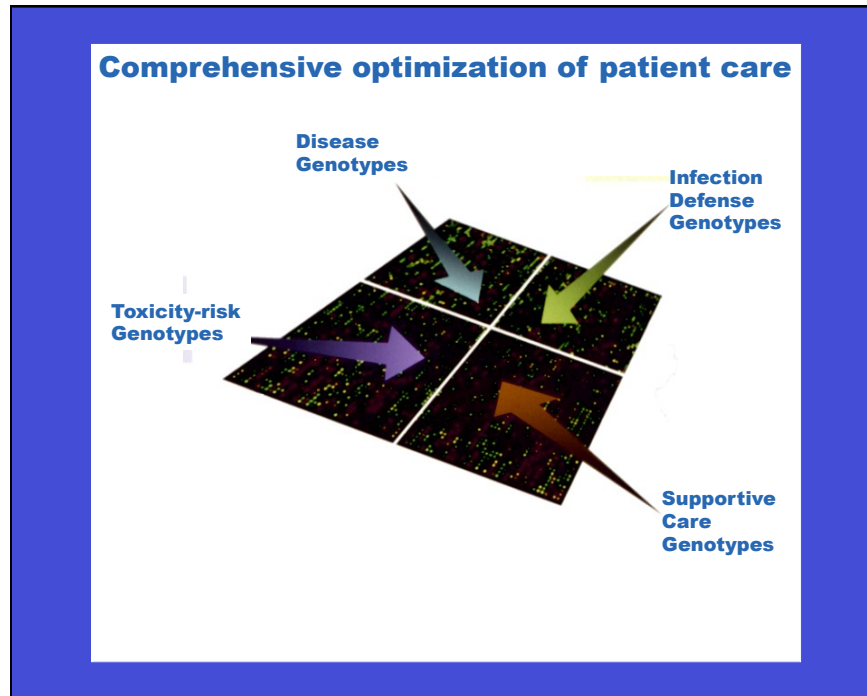

Irvin et al J Clin Oncol 2011

Study of 500 patients across NC is nearly completed, with oversampling of African American and Hispanic patient

Implementation Science can be conducted where most patients are treated

$t_{1/2} = 2-3$ hours

$t_{1/2} = 6$ hours

PGENI

- Modern medical therapy is a key component of improved health
- Selection of medications for each indication is a combination of clinical consensus, access/cost of drugs, and familiarity
- Medicine prioritization is a high stakes undertaking
- We need to use all available data

PGENI 

Background: Source of data for patient therapy selection

Best option: individual 

Good: relevant geographic/
ethnic/racial population 

Worst: inferred world population

PGENI 

Voltaire

- "The best is the enemy of good."

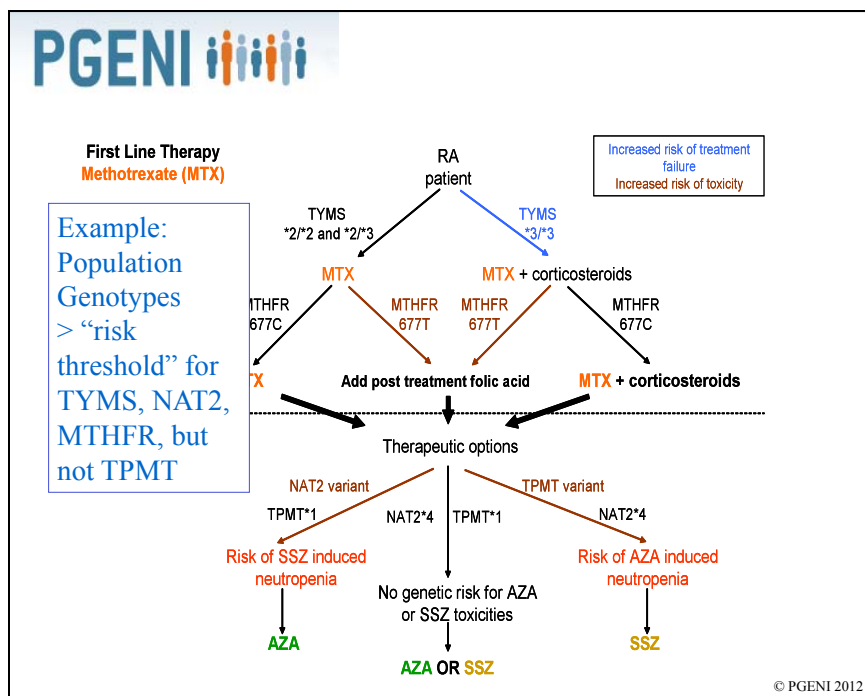

PGENI

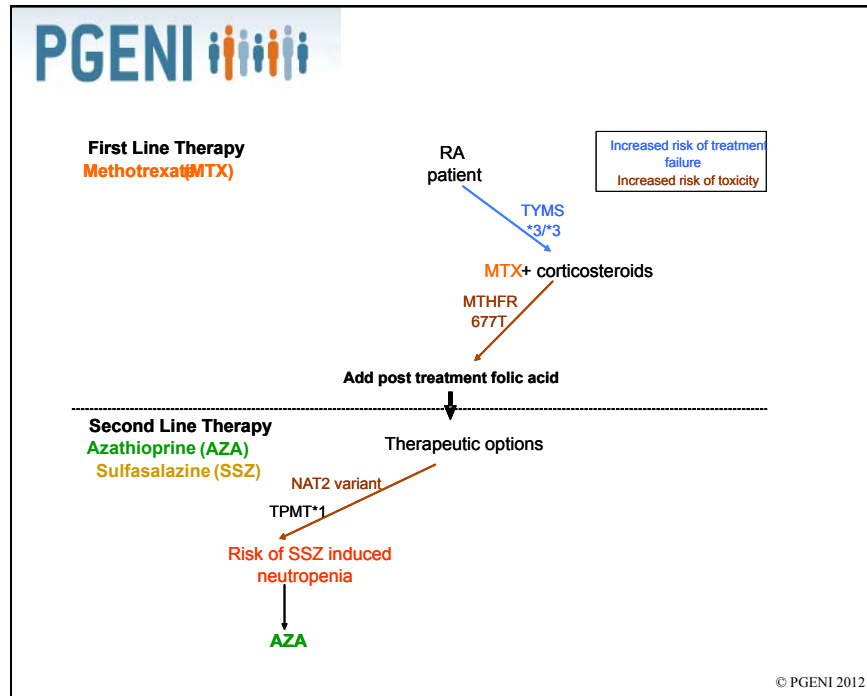

Type of output

Surveillance - identifying population subgroups at higher risk of toxicity or treatment failure

Prioritization - assisting the treatment selection from among WHO recommended therapies

PGENI Recommendation for China

Country Information
 Official Name: People's Republic of China

Recommendation

Using US Caucasian population frequency data as a reference, based on genetic variant frequency information, the following therapy strategy is suggested for China:

First Line: Methotrexate (MTX) with supplemental corticosteroid to improve efficacy
 Second Line: Either azathioprine (AZA) or sulfasalazine (SSZ) would be suggested.

NOTE: Pharmacogenetic information is one of many factors influencing the choice of therapy and shouldn't be used as the sole basis for drug selection

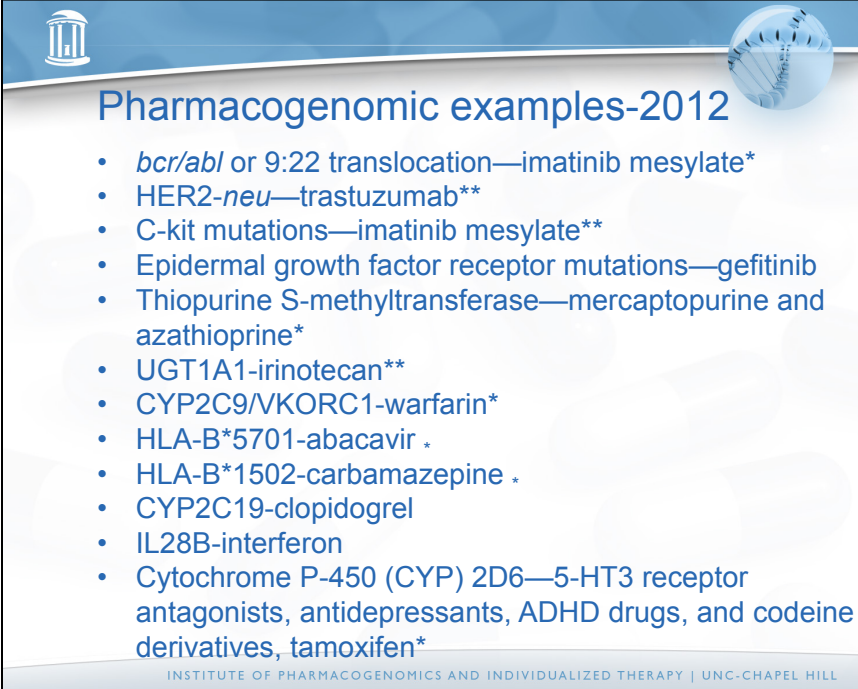

Recommendation

Using US Caucasian population frequency data as a reference, based on genetic variant frequency information, the following therapy strategy is suggested for China:

First Line: Methotrexate (MTX) with supplemental corticosteroid to improve efficacy
 Second Line: Either azathioprine (AZA) or sulfasalazine (SSZ) would be suggested.

NOTE: Pharmacogenetic information is one of many factors influencing the choice of therapy and shouldn't be used as the sole basis for drug selection

Warfarin Package Insert

Table 5: Range of Expected Therapeutic Warfarin Doses Based on CYP2C9 and VKORC1 Genotypes[†]

VKORC1	CYP2C9					
	*1/*1	*1/*2	*1/*3	*2/*2	*2/*3	*3/*3
GG	5-7 mg	5-7 mg	3-4 mg	3-4 mg	3-4 mg	0.5-2 mg
AG	5-7 mg	3-4 mg	3-4 mg	3-4 mg	0.5-2 mg	0.5-2 mg
AA	3-4 mg	3-4 mg	0.5-2 mg	0.5-2 mg	0.5-2 mg	0.5-2 mg

[†]Ranges are derived from multiple published clinical studies. Other clinical factors (e.g., age, race, body weight, sex, concomitant medications, and comorbidities) are generally accounted for along with genotype in the ranges expressed in the Table. VKORC1 -1639 G→A (rs9923231) variant is used in this table. Other co-inherited VKORC1 variants may also be important determinants of warfarin dose. Patients with CYP2C9 *1/*3, *2/*2, *2/*3 and *3/*3 may require more prolonged time (>2 to 4 weeks) to achieve maximum INR effect for a given dosage regimen.

INSTITUTE OF PHARMACOGENOMICS AND INDIVIDUALIZED THERAPY | UNC-CHAPEL HILL | ITI@UNC.EDU

Factors that Correlate w/ Warfarin Dose

- Age
- Body surface area (BSA) or weight
- Amiodarone dose
- Other drugs (e.g. HMG CoA Reductase inhibitors)
- Target INR
- Race
- Sex
- Plasma vitamin K level
- Decompensated CHF or post-operative state
- CYP2C9 and VKORC1 genotype

INSTITUTE OF PHARMACOGENOMICS AND INDIVIDUALIZED THERAPY | UNC-CHAPEL HILL

The image displays the 'WARFARINDOSING' website interface and its mobile application, 'iWarfarin'. The website features a navigation menu on the left with links for Warfarin Dosing, Outcomes, Hemorrhage Risk, Patient Education, Contact Us, References, Glossary, and About Us. The main content area contains a form for estimating a warfarin dose, with fields for Age, Sex, Ethnicity, Race, Weight, Height, Smokes, Liver Disease, Indication, Baseline INR, Target INR, CYP2C9 Genotype, VKORC1-1639/3673 Genotype, Amiodarone/Cordarone Dose, Statin/HMG CoA Reductase Inhibitor, Any azole (eg. Fluconazole), and Sulfamethoxazole/Septtra/Bactrim/Cefrim/Sulfatrim. A red button at the bottom of the form reads '> ESTIMATE WARFARIN DOSE'. The mobile app, 'iWarfarin', shows a menu with options for 'Warfarin Dosing - IWPC Algorithm', 'Instructions', and 'Learn', along with unit selection buttons for 'ft/lbs' and 'cm/kg'. The footer of the website reads 'INSTITUTE OF PHARMACOGENOMICS AND INDIVIDUALIZED THERAPY | UNC-CHAPEL HILL | IPIT.UNC.EDU'.

We now have new audiences

- Past
 - Ourselves
 - Editors/reviewers
 - Study section
- Now
 - Clinic administrators
 - Payers
 - Patients

INSTITUTE OF PHARMACOGENOMICS AND INDIVIDUALIZED THERAPY | UNC-CHAPEL HILL | IPIT.UNC.EDU

We now have new (additional) endpoints

- Past
 - survival
 - Stent thrombosis
 - Severe neutropenia
- Now
 - Selection from amongst 'equal' therapies
 - Return on investment for medical home
 - Quality measures
 - Patient satisfaction

INSTITUTE OF PHARMACOGENOMICS AND INDIVIDUALIZED THERAPY | UNC-CHAPEL HILL | IPIT.UNC.EDU

I have ears, but cannot hear

- 44 year old white male (CSO at local biotech)
- AV block 2^o congenital heart disease
- Presents for placement of epicardial pacemaker
- Tells cardiologist, CT surgeon, anesthesiologist, and admitting team (cardiology fellow, resident, intern) that an executive physical revealed genetic data relevant to pain control and anticoagulation
- Adequate pain control (4/10) in recovery room on MS
- moved to CCU and switch to oxycodone during the night, waking up in severe pain (10/10), ignored x 24 hours
- Student and PharmD recognized CYP2D6 PM and patient was switched to hydromorphone (5/10)

INSTITUTE OF PHARMACOGENOMICS AND INDIVIDUALIZED THERAPY | UNC-CHAPEL HILL | IPIT.UNC.EDU

Thank you to the PGENIUSES!
