

A Research Study

Sharing Family Health Information about Sickle Cell Disease and Sickle Cell Trait

Our study goal is to:

Understand the social factors that may influence health communication about sickle cell disease and sickle cell trait.

You may be able to participate if:

- You have sickle cell disease or sickle cell trait OR You are related to someone with sickle cell disease or trait
- You are 18 years or older
- You are willing to share your family health history and answer questions about how your family shares risk information about sickle cell disease or sickle cell trait

What will our study include?

- A 45-60 minute phone interview
- A 45-60 minute online survey
- We will ask you to invite your family members to take part in our study

If you are an eligible candidate for our research study, you and any participating family members will be compensated for your time and effort.
