

**Multi-IC Symposium on Application of Genomic Technologies to
Population-Based Studies**

June 5-6, 2006
Bethesda Marriott

ISSUES FOR CONSIDERATION

**Panel 6: Proposed mechanisms for funding collaborative genomic projects that
capitalize on existing studies**

- a. Successful and unsuccessful models of how cohort, case-control, clinical trials and other NIH studies have incorporated genetics into their studies and funded them
- b. Challenges, advantages, and disadvantages of the various ways ICs have used to fund genetics research
- c. Potential data sharing problems and considerations: pros and cons of free access to data
- d. Intellectual property concerns
- e. Consent issues relevant to funding plans, for example lack of consent when genetic data is used for commercial purposes
- f. Cost
