Pride in STEM

Natural History Museum

We know that people from LGBTQ+ communities have made huge contributions to the Museum’s history - although some stories have been sidelined from historical records and archives, making them very difficult for us to find.

If you know any, please share with us!
Queer eugenics

"The eugenical conclusion is that females belonging to hermaphroditic (hypospadiac or cryptorchitic) strains, if married, will probably have at least half of their sons defective, particularly if they have defective brothers; but normal males of such strains may marry females from unaffected strains with impunity." From Charles Davenport's *Hereditary in Relation to Eugenics* (1911)
Franz Josef Kallmann
